STRETCH WRAPPING TECHNOLOGY

STANDARD WRAPPING CYCLE

The wide range of machines includes turn-table, rotating arm and rotating ring type of stretch wrappers, that can perform a standard cycle, wrapping the four sides of the pallet with stretch film.

The different type of machines can meet any production request, from low to very high capacity.

DUST-PROOF WRAPPING CYCLE

The range of machines includes turn-table, rotating arm and rotating ring type of stretch wrappers, that, equipped with integrated or separate top sheet dispenser, can perform a dust-proof cycle, placing first a polyethylene film sheet on the top of the pallet and then wrapping the pallet with stretch film. With this cycle the palletized load is completely covered and protected against dust and dirt.

WATER-PROOF WRAPPING CYCLE

The range of machines includes turn-table, rotating arm and rotating ring type of stretch wrappers, that can perform a water-proof cycle. Thanks to an integrated top sheet dispenser, the pallet is wrapped with a first layer of film, then the polyethylene film sheet is placed on the top of the pallet and finally the pallet is wrapped with a second stretch film layer. With this cycle the pallet is completely protected from humidity and rain, and can be stored in open air.
